DETAILED ACTION

Claims 1-13, pending in this application, are subject to the following restriction/election requirement.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a transgenic plant comprising a nucleotide sequence encoding a disease resistance polypeptide, and a method for producing said plant, classified in class 800, subclass 279, for example.
- II. Claims 11-13, drawn to a method for identifying a plant that has PPR2 allele that results an increased resistance using QTL and Tilling methodologies classified in class 435, subclass 6, for example.

The inventions I-II are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).

The instant specification does not disclose that these methods would be used together.

The plant transformation method and the method of selecting a plant are unrelated as they comprise distinct steps and utilize different products which demonstrate that each method has a different mode of operation. Each invention performs this function using structurally and functionally divergent material, and therefore the inventions I and II are patentably distinct. The methodology and materials necessary for selecting and testing

a plant for the presence or absence of nucleic acids differ significantly from the methodology and materials for transforming a plant. Furthermore, the distinct steps and products require separate and distinct searches. The inventions of Groups I and II have a separate status in the art as shown by their different classifications. As such, it would be burdensome to search the inventions of Groups I and II together.

Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and the search required for each group is not required for the other group because each group requires a different non-patent literature search due to each group comprising different products and/or method steps, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
